

.title

The media component commands

.synonym

component commands

.description

The commands marking the different components
of the content or description of an article.

.content

.para

These are the commands marking the different components (pictures, text, sound,
etc.) of the content or description of an article.

.para A media component begins after a component command and ends
with the next component command or field command.

The available commands are:

.nl

.quote-line .text or .text

.nl

Begins a text component. In fact this command is the default
component command. Everything which is not a command or its argument
is considered text.

.nl

.nl

.quote-line .picture or .PICTURE <name of the picture>

.nl Begins a picture component. It's followed by an argument which is
the name of the picture. (see .~ picture name file format~, and
.~ list of available stamp classes~)

.nl

.nl

.nl

.para

PROJECTS: other media components will be created if the hardware is available
(sound, video...)
