

aut-howtolink.st0:16:tilde and a space, then the text of the button terminated by another tilde.)

aut-howtolink.st0:17:.nl For example, .quote-line .~ button~

aut-howtolink.st0:18:As usual the text of the button should be the .~ title of an article~

aut-howtolink.st0:27:We will go back the the use of the tildes (i.e. ~button~),

aut-howtolink.st0:30:We now use the .quote .~ command to simplify the job of the .~ formatter~ .

aut-index.st0:17:This article is created automatically by the ~master-index builder~ which

aut-overview.st0:14:you want under a root directory (see .~ examples of database organisation~).

aut-overview.st0:19:to include the graphic files and .~ associated files~ in your

aut-overview.st0:32:.nl 1- Build the ~. master-index~. For that you have to invoke the

componentcommand.st0:34:the name of the picture. (see .~ associated files~, .~ picture name

content.st0:19:it uses a special .~ markup language~ to indicate page

datastructure.st0:28:Other .~ associated files~ contain graphical images (or other data, such

datastructure.st0:37:A special story board, .~ defaults.st0~, contains all the defaults settings and initializations.

doc-overview.st0:8:This documentation describes the .~ current version~ of Hyperties on the SUN.

doc-overview.st0:10:It describe the .~ functionalities~ , the .~ data structure~ , the .~ document-description language~.

doc-overview.st0:12:It also covers the .~ organization of the software~.

fieldcommands.st0:37:.quote-line .note, .notes, .NOTE or .NOTES

fieldcommands.st0:38:.nl Indicates the beginning of the .~ notes~ about an article. The

fieldcommands.st0:39:notes start after one of the above commands and cause the rest of the file

formatter.st0:35:by using a dot-tilde command, followed by a space, then the button

formatter.st0:36:name, terminated by a tilde, so buttons appear as

formatter.st0:37:.quote-line .~ button~

formatter.st0:41:The formatter is composed of 3 parts: the .~ storyboard interpreter~

formatter.st0:43:..~ NeWS Interface~ (fmt.cps).

formatter.st0:46:The formatter accesses the master index through the .~ master index handler~

index.st0:10:.nl .~ Authoring: the markup language~

index.st0:24:.nl .~ MenuTarget Class~

index.st0:33:.nl .~ picture name file format~

makeindex.st0:9:A utility program of the compiler which creates the master-index and

makeindex.st0:20:for storyboards and associated files. It uses the

makeindex.st0:25:and associated files necessary to run any database, including

markup.st0:2:Authoring: the markup language

markup.st0:5:the markup language

markup.st0:8:Describes the markup language used to describe the article.

markup.st0:13:display an article. The author has to use a markup language to

markup.st0:26:.spaces 8 To separate title, synonyms, contents, notes

picandtarname.st0:16:to those objects. Therefore a picture has a picture name, and a

picandtarname.st0:17:target has a target name. The author creates .quote .pn0 (for picture names)

picandtarname.st0:20:articles on .~ picture name file format~ and

picandtarname.st0:32:.quote .picture name of a picture (newline)

pnformat.st0:2:picture name file format

pnformat.st0:32:The picture name can be any ascii string, enclosed in double quotes.
pnformat.st0:45:.quote .pn0 files are stored. It is the role of the master-index
